

## Getting MySQL to work for VSCode

1. Install MySQL:
  - Ensure to remember your user and passwords
  - Download: <https://dev.mysql.com/downloads/windows/installer/>
  - Video: <https://www.youtube.com/watch?v=WuBcTJnluzo>
2. Install JDBC:
  - Download: <https://dev.mysql.com/downloads/connector/j/5.1.html>
  - Video: <https://www.youtube.com/watch?v=2i4t-SL1VsU>
3. Create a “lib” folder in the Java project directory and paste the “mysql-connector-java-5.1.48-bin.jar” file from the JDBC download into it.

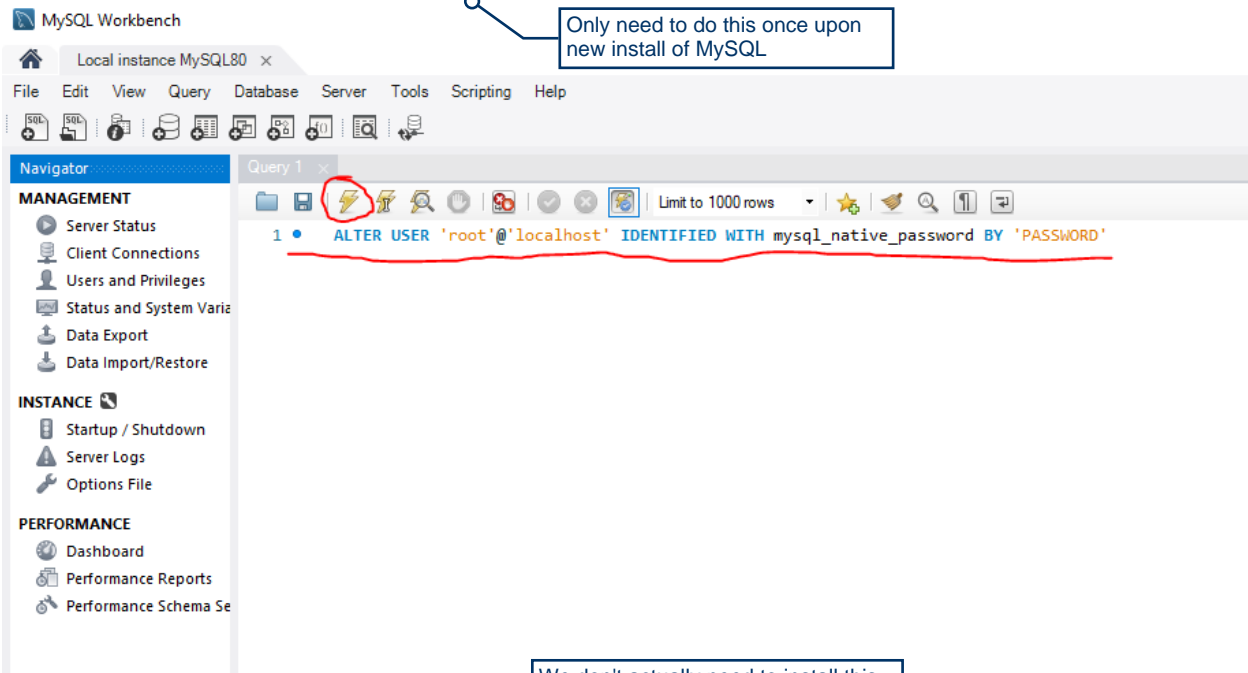

4. Add the “mysql-connector-java-5.1.29-bin.jar” file from the JDBC download into the Java project classpath.

Before running code, make sure that the workspace cache is cleaned, or else this won't work

```
.classpath x
.classpath
1 <?xml version="1.0" encoding="UTF-8"?>
2 <classpath>
3   <classpathentry kind="con" path="org.eclipse.jdt.launching.JRE_CONTAINER/org.e
4   <classpathentry kind="src" path="src"/>
5   <classpathentry kind="src" path=".settings"/>
6   <classpathentry kind="src" path="lib"/>
7   <classpathentry kind="output" path="bin"/>
8   <classpathentry kind="lib" path="lib/mysql-connector-java-5.1.48-bin.jar"/>
9 </classpath>
10
```

5. Open MySQL workbench and enter the query “ALTER USER 'root'@'localhost' IDENTIFIED WITH mysql\_native\_password BY 'PASSWORD'”
  - Note that “PASSWORD” should be replaced by your personal MySQL password

We don't actually need to install this.. It can be useful to view databases in VSCode, but isn't required

6. Test your connection by downloading the SQLTools VSCode extension

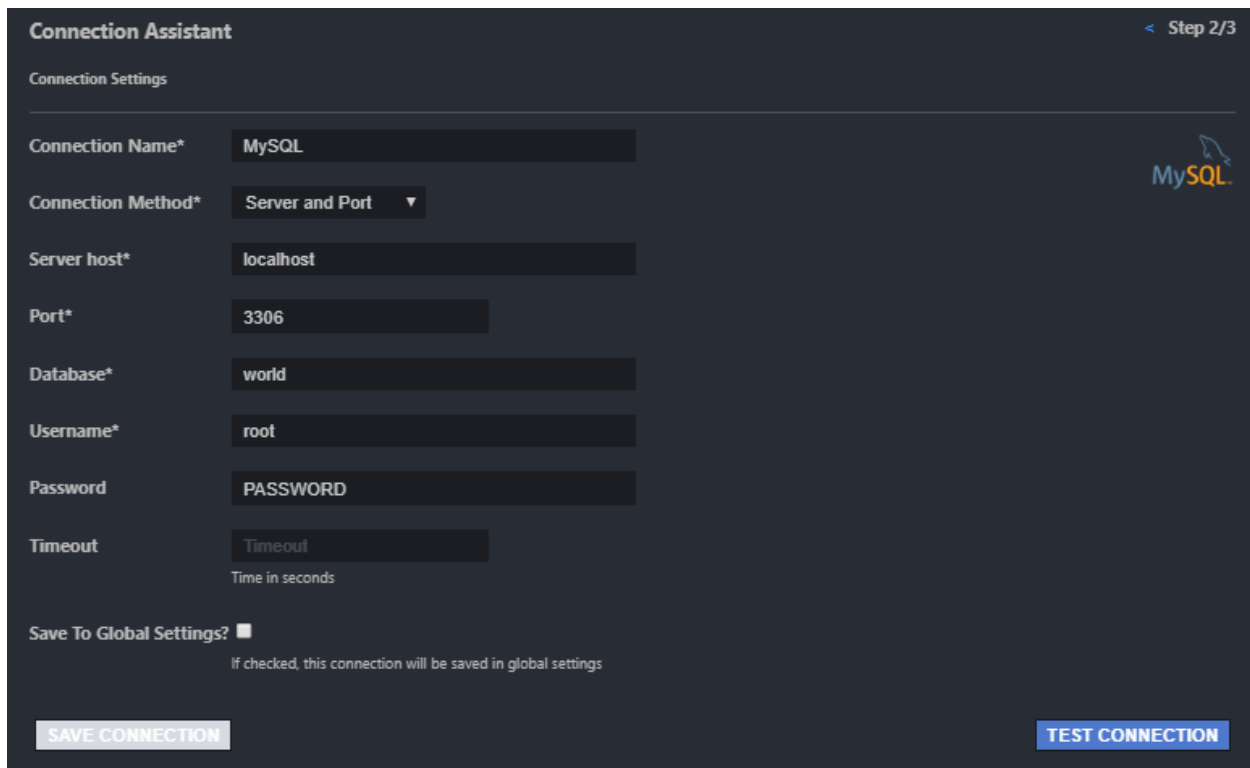

- Add new connection

- Select MySQL

- Input credentials and press “Save Connection”
  - Connection Name can be anything
  - Database “world” is one of the pre-set databases that comes after downloading MySQL. You can see it using MySQL Workbench (See Appendix A)
  - Note that “PASSWORD” should be your personal MySQL password

**Connection Assistant** < Step 2/3

Connection Settings

Connection Name\* MySQL

Connection Method\* Server and Port ▼

Server host\* localhost

Port\* 3306

Database\* world

Username\* root

Password PASSWORD

Timeout Timeout  
Time in seconds

Save To Global Settings? ☐  
If checked, this connection will be saved in global settings

**SAVE CONNECTION** **TEST CONNECTION**

7. If successful, you should see something like the following:

## Appendix A
